YOUR MONTHLY DOSE OF **TECH & BUSINESS NEWS**

Monthly update from Mark

Does it seem like AI is about to take over the world? Since ChatGPT came on the scene, closely followed by Google's Bard, it feels like AI has taken a giant leap forward. CEOs are using it to write emails and job candidates are having it draft their resumes. That's just the tip of the iceberg.

If you're both excited about its potential and terrified of what it can do, you're not alone. Like any disruptive technology (e.g., the cloud, the internet), AI is just beginning to make a splash and companies are still trying to understand how to best use it.

When used responsibly, AI-powered chatbots like ChatGPT, Jasper and Bard have a lot to offer workers in the way of productivity. But they do have their drawbacks and need to be reined in for specific purposes.

We can help. Email us at mark@phrixus.com to schedule a chat about how your company could use AI to best support your operations.

Until then, stay safe,

Mark

The number of apps and web tools that employees use on a regular basis continues to increase. Most departments have about 40-60 different digital tools that they use. 71% of employees feel they use so many apps that it makes work more complex.

Many of the apps that we use every day have various alerts. We get a "ping" when someone mentions our name on a Teams channel. We get a notification popup that an update is available. We get an alert of errors or security issues.

App fatigue is a very real thing and it's becoming a cybersecurity problem. The more people get overwhelmed by notifications, the more likely they are to ignore them.

Just think about the various digital alerts that you get. They come in:

- Software apps on your computer
- · Web-based SaaS tools
- · Websites where you've allowed alerts
- Mobile apps and tools
- Email banners
- Text messages
- Team communication tools

Some employees are getting the same notification on two different devices. This just adds to the problem.

This leads to many issues that impact productivity and cybersecurity.

Besides alert bombardment, every time the boss introduces a new app, that means a new password.

Employees are already juggling about 191 passwords.

They use at least 154 of them sometime during the month.

How Does App Fatigue Put Companies at Risk?

Employees Begin Ignoring Updates

When digital alerts interrupt your work, you can feel like you're always behind.

This leads to ignoring small tasks seen as not timesensitive.

Tasks like clicking to install an app update.

Employees overwhelmed with too many app alerts, tend to ignore them.

When updates come up, they may quickly click them away. They feel they can't spare the time right now and aren't sure how long it will take.

Ignoring app updates on a device is dangerous.

Many of those updates include important security patches for found vulnerabilities.

When they're not installed, the device and its network are at a higher risk. It becomes easier to suffer a successful cyberattack.

Employees Reuse Passwords (and They're Often Weak)

Another security casualty of app fatigue is password security.

The more SaaS accounts someone must create, the more likely they are to reuse passwords. It's estimated that passwords are typically reused 64% of the time.

Credential breach is a key driver of cloud data breaches. Hackers can easily crack weak passwords. The same password used several times leaves many accounts at risk.

Employees May Turn Off Alerts

Some alerts are okay to turn off. For example, do you really need to know every time someone responds to a group thread?

But, turning off important security alerts is not good.

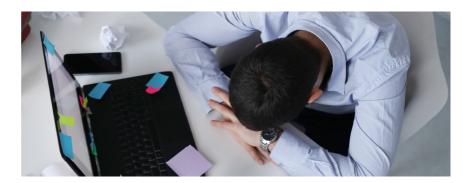

There comes a breaking point when one more push notification can push someone over the edge.

What's the Answer to App Fatigue?

It's not realistic to just go backward in time before all these apps were around.

But you can put a strategy in place that puts people in charge of their tech, and not the other way around.

- Streamline Your Business Applications
- Have Your IT Team Set up Notifications
- Automate Application Updates
- Open a Two-Way Communication About Alerts

The Magnus Pro Standing Desk is the ultimate workspace transformer that will keep all those unsightly cables organised. Say goodbye to the mundane sitting life and embrace the power of standing tall.

With a sleek design, sturdy frame, and effortless height adjustment, this desk is the perfect sidekick for your productivity crusade. So, gear up, stand up, and conquer your workday with the Magnus Pro.

Get yours at secretlab.co

In today's fast-paced world, the need for efficient and effective communication has never been more critical.

With the rise of remote work and the increasing reliance on technology, virtual appointments have become an essential tool for businesses and organisations worldwide.

Microsoft Teams, a powerful collaboration platform, has emerged as a game-changer in this arena, offering seamless virtual appointments that redefine the way we connect, collaborate, and communicate.

The Rise of Virtua Appointments

The global pandemic has accelerated the adoption of remote work, with businesses and organisations scrambling to find ways to maintain productivity and communication while keeping their employees safe.

VIRTUAL APPOINTMENTS IN MICROSOFT TEAMS

Virtual appointments have become the go-to solution, allowing teams to connect and collaborate without the need for physical presence.

Microsoft Teams, a platform designed to facilitate teamwork and communication, has risen to the challenge, offering a comprehensive suite of tools that make virtual appointments a breeze.

From video conferencing to file sharing, Microsoft Teams has everything you need to conduct successful virtual appointments, all in one place.

Benefits of Virtual Appointments in Microsoft Teams

1. Enhanced Collaboration

Microsoft Teams allows users to collaborate in real-time, making it easier than ever to work together on projects, share ideas, and make decisions. With features like screen sharing, whiteboarding, and file sharing, virtual appointments in Microsoft Teams enable teams to work together seamlessly, no matter where they are located.

2. Increased Flexibility

Virtual appointments in Microsoft Teams offer unparalleled flexibility, allowing team members to join meetings from any device, anywhere.

This means that employees can participate in important discussions and decision-making processes even if they're on the go or working from home.

3. Cost Savings

By eliminating the need for physical meeting spaces and reducing travel expenses, virtual appointments in Microsoft Teams can result in significant cost savings for businesses and organisations. Additionally, the platform's robust features and integrations eliminate the need for multiple software subscriptions.

4. Improved Communication

Microsoft Teams' virtual appointments facilitate clear and effective communication, thanks to high-quality video and audio capabilities. The platform also offers features like live captions and translations, ensuring that language barriers and accessibility issues are no longer a hindrance to effective communication.

5. Enhanced Security

Microsoft Teams is built on the secure and reliable Microsoft 365 platform, ensuring that your virtual appointments are protected by enterprise-grade security measures. This means that you can conduct your meetings with confidence, knowing that your data and conversations are safe.

04

THESE EVERYDAY OBJECTS CAN LEAD TO IDENTITY THEFT

You wouldn't think a child's toy could lead to a breach of your personal data. But this happens all the time.

What about your trash can sitting outside? Is it a treasure trove for an identity thief?

Many everyday objects can lead to identity theft.

Old Smart Phones

A cybercriminal could easily strike data theft gold by finding an old smartphone. Make sure that you properly clean any old phones by erasing all data.

Wireless Printers

Protect wireless printers by ensuring you keep their firmware updated. You should also turn it off when you don't need it.

USB Sticks

You should never plug a USB device of unknown origin into your computer. This is an old trick in the hacker's book. They plant malware on these sticks and then leave them around as hait

Old Hard Drives

When you are disposing of an old computer or old removable drive, make sure it's clean. Just deleting your files isn't enough.

It's best to get help from an IT professional to properly erase your computer drive. This will make it safe for disposal, donation, or reuse.

Trash Can

Identity theft criminals aren't only online. They can also be trolling the neighborhood on trash day. Be careful what you throw out in your trash.

Children's IoT Devices

You should be wary of any new internet-connected kids' devices you bring into your home. Install all firmware updates and do your homework

ATMs

This is called skimming. Malicious actors can use hidden devices on ATMs or card readers to steal your card information during transactions.

05 TECHNOLOGIES TO GIVE YOU AN ADVANTAGE

Customers look for convenience. In today's world that means technology that makes their life easier.

From webforms to POS systems, you need to keep the customer experience in mind in all you do.

When people aren't happy with their experience interacting with a company, they leave.

And their experience might not have anything to do with your products or services. Maybe they found it hard to navigate your website.

Technology is key to converting website visitors into clients.

These techonologies can give you that edge:

- Cloud Forms
- Digital Signatures
- Smart Chatbot
- SMS Notifications
- Business
- Mobile App
 FAQ Kiosk
- VoIP Phone System

6 THINGS YOU SHOULD DO TO HANDLE DATA PRIVACY UPDATES

Once data began going digital, authorities realised a need to protect it. Many organisations have one or more data privacy policies they need to meet.

Industry and international data privacy regulations are just the tip of the iceberg. Here are a few things you should look into to handle data privacy updates:

- Identify the Regulations You Need to Follow
- Stay Aware of Data Privacy Regulation Updates
- Do an Annual Review of Your Data Security Standards
- Audit Your Security Policies and Procedures
- Update Your Technical, Physical & Administrative Safeguards As Needed
- Keep Employees Trained on Compliance and Data Privacy

07

THE COOLEST TECH FROM CES 2023

At the beginning of each year, a group of global innovators meets. They introduce and show off breakthrough technologies at the Consumer Electronics Show (CES).

People love their gadgets. It's estimated that the global smart home household penetration was 14.2% in 2022. By 2027, it's expected to more than double to 28.8%.

What new gadgets did innovators introduce at this year's CES?

Here are a few that you may want to check out further:

- Loona Intelligent Petbot: Want a pet that doesn't make a mess?
- Ring Car Cam: More than just a dash cam
- AtmosGear Electronic Skates: Up to 25km/H of fun
- Tilt Five Augmented Reality Glasses: Change the way you interact with the world
- Jabra Enhance™ Plus: Hearing aids or headphones? A little bit of both
- Twinkly Squares: Add a pop of color to any space
- Xebec Tri-Screen 2: Dual portable monitors for your laptop

WE LOVE REFERRALS

The greatest gift anyone can give us is a referral to your friends. Referrals help us keep costs down so we can pass the savings to our clients.

If your friend ends up becoming a client - we'll gift them their free first month of service (for being a friend of yours) AND we'll gift you \$500 cash/gift voucher. Simply introduce me via email to **mark@phrixus.**com and I'll take it from there. I personally promise we'll look after their business with a high level of care and attention (just like we do with all our clients).

Office.com and the Microsoft Office App

🚺 Microsoft 365 (Office)

Towards the end of April we started to receive many support requests after a faulty Microsoft update made many people unable to login with their PIN numbers, face recognition or fingerprint reader.

Whilst we wait for Microsoft to resolve this from occurring it became apparent many of our clients were not sure of what their passwords are. A PIN is the 6 numbers to access your laptop/PC, it should be regarded very similar to a PIN on your mobile phone. You can always login to your system with your Microsoft 365 username (email address) and password. This is the main way to access your Microsoft cloud data. It is vitally important you always remember your usernames and passwords. To test yours, open an InPrivate/Incognito web browser and login to https://office.com You can access all your cloud information from here and you may also use the Microsoft 365 Office Application too, from the Windows start menu under All apps.

Why do Java developers wear glasses?

Because they don't C#!

TECHNOLOGY TRIVIA

The question this month is:

What material was the first computer mouse made of?

The first person to email me at mark@phrixus.com
and give a correct answer gets a \$50
Amazon Gift Card!

Each month you have a chance to win a \$50 Amazon Gift Voucher by being the first person to email us with the answer to our Technology Trivia Question of the Month!

Outlook on the Web

Outlook

Very often we receive support requests from panicked clients if their Outlook desktop application suddenly fails.

Instead of stressing that you cannot use Outlook to send and receive emails. Please always remember you can use Outlook on the Web anytime as either a workaround until our team can assist with fixing Outlook. Many people are now using web apps instead of traditional desktop applications. Give it a try by logging in at:

https://outlook.office.com
